

Shanks Energy from Waste Plant

JBD Tritec Limited were delighted to become involved in the recent works commissioned by Shanks Waste Management involving the technical expertise of Energen Biogas at their Cumbernauld site.

The brief was to assemble all of the components required with the objective of converting waste which would otherwise have gone to landfill into energy, an excellent all round environmental solution.

JBD Tritec has one of the foremost pipework operations in Scotland and that, coupled with the fact that steelwork, fabrication, pump and valve services are all dealt with in-house, led to the appointment by Shanks to carry out the works.

JBD Tritec's recently formed Pump Division sized and specified various of the pumps required, JBD Tritec mechanical personnel dealing with their installation.

The fact that one company was dealing with various aspects of the installation greatly facilitated the process, despite horrendous weather conditions at the turn of the year the project was delivered on time and on budget. Contact for this contract is Mr. Robert Etherson.
